

Adult Immunizations

We Administer Adult Immunizations

55,000–80,000 people die each year from preventable diseases.

Influenzae (Flu) and pneumonia are the 7th leading cause of death in the USA, and 5th among the elderly.

You Are At Risk For A Preventable Disease If You:

- Are 60 years of age or older
- Are immunosuppressed
- Have lung diseases such as COPD, asthma, or emphysema
- Have heart diseases like high blood pressure, stroke, heart attack, CHF
- Have diabetes
- Are a healthcare worker
- Are a resident or an employee of a long-term care facility

Pneumococcal disease is the leading cause of vaccine-preventable deaths. The pneumococcal vaccine reduces the risk of invasive diseases (those with the highest risk of death) by 60 - 70 percent.

Influenzae is responsible for up to 36,000 deaths per year, of which 90% are in persons over the age of 65. Flu shots can reduce the risk of death by 80%.

Shingles can cause extreme pain and discomfort. Zostavax, the shingles vaccine, reduces the risk of infection by 51%, and reduces the nerve-related pain and the severity of the disease by 66%.

Call Vann Healthcare Pharmacy today to find out if you are a candidate for one or more of these important vaccines. Do not put yourself at risk of one of these preventable diseases.

Available Services:
